
ACROSS

5. A sales analyst finds that a reported average includes cancelled orders. What calculation approach should be inspected and corrected? (6)

6. A forecast treats next month as having the same demand as this month without supporting data. What unstated starting belief needs testing? (10)

7. An assistant keeps agreeing with weak proposals instead of challenging them as requested. Which aspect of the interaction needs review? (9)

DOWN

1. A store manager asks about stock shortages but receives a long history of retail. Which quality is missing, even if the history is correct? (9)

2. A hiring summary judges similar experience more harshly for one group than another. What unfair pattern should the reviewer investigate? (4)

3. A customer notice contains an unsupported promise. After checking the policy, what should the writer do to the draft before sharing it? (6)

4. An AI summary gives a new industry statistic. Before using it, a researcher opens the original publication to check the claim. What is being checked? (6)

6. A finance analyst compares every AI-extracted invoice amount with the original invoice. What quality is being checked? (8)
